SUBJECT

English/Language Arts

GRADE LEVEL

Grade 3

DURATION

30 minutes

Learning Objectives

- 1 Students will be able to define AI and identify AI agents.
- 2 Students will be able to list at least three real-world applications of AI.
- 3 Students will be able to differentiate between ChatGPT, Gemini, and Grok.
- 4 Students will be able to articulate how AI can be used responsibly and ethically.

Materials Needed

- Whiteboard or projector
- Markers or pens
- Chart paper or large poster board (1)
- Student notebooks or worksheets (25)
- Pictures or illustrations of AI applications (e.g., self-driving cars, robots, virtual assistants) (5-10 pictures)
- Printed comparison charts for ChatGPT, Gemini, and Grok (25)
- Internet access (optional, for demonstrating AI tools)

Introduction / Hook

Welcome to the World of AI! (5 minutes)

* **Hook (2 minutes):** Begin by asking students: "Have you ever heard of AI? What do you think it is?" Write their initial thoughts on the board.

* **Engage (3 minutes):** Show a quick, engaging video clip (1-2 minutes) about AI applications (e.g., a short explanation of self-driving cars or a demonstration of a helpful robot). Ask students if they have seen or used any AI applications. Focus on sparking curiosity and generating interest in the topic.

Direct Instruction

What is AI and Where Do We See It? (10 minutes)

* **Defining AI (3 minutes):**

* Directly instruct students on the definition of AI: "AI stands for Artificial Intelligence. It means making computers or machines think and learn like humans."

* Explain the concept of AI agents: "AI agents are the 'thinkers' inside the machines, software, or robots that allow them to make decisions and perform tasks."

* Provide simple examples: A video game character that learns your playing style, a smart speaker that answers your questions.

* **Real-World Applications (5 minutes):**

* Show pictures of various AI applications (self-driving cars, medical diagnosis, virtual assistants, etc.).

* For each picture, briefly explain how AI is used in that application.

* Engage students with questions: "Where else do you think AI might be helpful?" "Can you think of any everyday tools that might use AI?"

* **Key Vocabulary (2 minutes):** Introduce the terms 'AI Agents' and 'AI Applications' and reinforce their meanings through examples.

Guided Practice

Exploring ChatGPT, Gemini, and Grok (8 minutes)

- * **Introduction to AI Models (2 minutes):** Explain that ChatGPT, Gemini, and Grok are powerful AI models that can generate text, translate languages, write different kinds of creative content, and answer your questions in an informative way. They are like super-smart virtual assistants.
- * **Comparison Activity (4 minutes):**
 - * Divide students into small groups (3-4 students per group).
 - * Provide each group with a printed comparison chart outlining the key features, strengths, and weaknesses of ChatGPT, Gemini, and Grok (a simple chart highlighting differences in focus or strengths, e.g., ChatGPT - Creative writing, Gemini - Data analysis, Grok - Real-time information). (If internet access is available, you can have them briefly explore each model online.)
 - * Ask each group to discuss the differences and similarities between the AI models.
- * **Group Sharing (2 minutes):** Have each group share one key difference they identified between the models. Write these differences on the board.

Independent Practice

AI Brainstorming (5 minutes)

- * **Individual Task (5 minutes):**
 - * Ask each student to think about a problem in their school or community.
 - * Instruct them to write down one way that AI could potentially help solve that problem. Encourage creative and imaginative solutions.
 - * Example: "Problem: Litter in the playground. Solution: A robot that automatically picks up litter."

✓ Closure

Wrapping Up (2 minutes)

- * **Review (1 minute):** Briefly review the key concepts covered in the lesson: What is AI? What are some AI applications? What are ChatGPT, Gemini, and Grok?
- * **Question (1 minute):** Ask students: "What is one thing you learned about AI today that you found interesting?"

Assessment

Formative Assessment and Self-Assessment

- * **Formative Assessment (Ongoing):** Observe student participation in discussions, group activities, and independent practice. Collect the student's brainstorming ideas for review.
- * **Self-Assessment (At the End):** Ask students to give a thumbs up, thumbs sideways, or thumbs down to indicate their understanding of the following concepts:
 - * What AI is
 - * Examples of AI applications
 - * The difference between ChatGPT, Gemini, and Grok

Differentiation

Differentiation Strategies

- * **Struggling Learners:**
 - * Provide simplified definitions and examples of AI.
 - * Pair them with a stronger student during group activities.
 - * Offer pre-written sentence starters for the independent brainstorming activity.
- * **On-Level Students:**
 - * Encourage them to elaborate on their brainstorming ideas with more details.
 - * Provide additional examples of AI applications to inspire them.
- * **Advanced Learners:**
 - * Challenge them to research and present a specific AI application in more detail.
 - * Ask them to consider the potential ethical implications of AI and how to use it responsibly.

Accommodations

Accommodations for ELL, IEP, and 504 Students

* **ELL Students:**

- * Provide visual aids and graphic organizers to support understanding.
- * Use simplified language and repeat key concepts.
- * Allow them to respond to questions using drawings or gestures.

* **IEP and 504 Students:**

- * Provide preferential seating to minimize distractions.
- * Offer extended time for activities and assessments.
- * Modify assignments as per their individual education plans.

Extensions

Extension Activities

- * **AI Ethics Discussion:** Start a brief discussion about the ethical considerations of AI, such as bias, privacy, and job displacement. Ask students: "What are some potential problems with AI?" "How can we make sure AI is used for good?"
- * **Future AI Ideas:** Encourage students to brainstorm future applications of AI. What new problems could AI solve?

Homework / Follow-up

No formal homework. Encourage students to talk to their families about what they learned about AI and to look for examples of AI in their daily lives.

Teacher Reflection Notes

Teacher Reflection Questions

- * How engaged were the students in the lesson?
- * Which activities were most effective in helping students understand the concepts?
- * What challenges did students face during the lesson?
- * How can I improve this lesson in the future to better meet the needs of all students?
