Getting Started with CSS	

Introduction

This comprehensive guide will teach you everything you need to know about web development.

CHAPTER 1

HTML Basics

What is HTML?

HTML is the standard markup language for creating web pages. It describes the structure of a web page semantically.

Steps:

- 1 Create a new file with .html extension
- 2 Add the DOCTYPE declaration
- 3 Add the html, head, and body tags
- 4 Start adding your content

Pro Tip

Always validate your HTML to ensure proper structure.

CHAPTER 2

CSS Styling

Getting Started with CSS

CSS is used to style and layout web pages. You can change colors, fonts, spacing, and much more.

Steps:

- 1 Link a CSS file to your HTML
- 2 Select elements using selectors
- 3 Apply styles with property-value pairs

Pro Tip

Use a CSS reset to start with a clean slate.
